**CALCULATIONS:**

Cross sections provided by Michael Ash, Turning Point Solutions, PLLC, dba Mountain State Land Surveying, 342 Sandstone Drive, Lost Creek, West Virginia 26385, 304-476-8668, michael@mtnlandsurveying.com.

Basin areas were measured in a geographical information system (GIS) using a point on line with the cross sections and going upstream. Manning's N values were derived from the current National Landcover Dataset and aerial photography. Cross sections (XS) were surveyed and a USGS StreamStats (NSS) regression equation used to determine discharge at the cross section locations as well as an slope (EG Slope). A water surface was created from the cross sections representing the BFE values and contours were created from the surface using GIS tools.

Figure shows referenced request coordinate point as a red dot with a resulting BFE value. The two cross sections used to calculate the BFE water surface are shown as red lines and labeled with reference ID numbers. The resulting BFE water surface calculated from the cross sections was used to create contours lines at a 0.5 foot interval. These are shown in orange and labeled with their BFE elevation values.
